

Microperfs & megapanel – yeh kya hai? When MP3 is not music and 1 is more than 12!

Microperfs

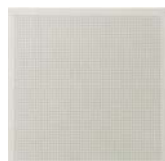

Microperfs is the new art of minutely perforating solids like metals, woods and plasters. And at 3mm, it is as close as you get to perforating 12mm thick fibreboards and plasterboards.

MP3 is the *new* acronym for Micro Perforated 3mm on **Salon Spots** wood ceilings. With a rich wood grain finish and microperfs that render them almost invisible from a distance, such ceilings arouse visual excitement with no ugly holes marring the show. Welcome to the new aesthetic!

Check out our other microperfs. **Pixel** 3x3mm square perfs in **Designpanel**, **Belgravia** and **Plaza** for gypsum-based ceilings and **Auriga** 0.7mm perfs for **Serge** metal ceilings rendering them almost solid. Add to the new aesthetic!

Megapanel

Megapanel from Anutone are giant-size panels, and at 1.2x3.6m (4'x12') they are as large as it gets.

So, instead of 12 tiles of standard size 600x600mm (2'x2') you install 1 megapanel – 4.32m² in one go! Less seamlines, less work, faster install, lower overall costs.

Available in **ACT GLD**, **ACT KLH** and **Subtle Texture** series with Skelet Z-bar mounting. Size does matter – 1 is more than 12 - the new arithmetic!!

Anutone Walls & Ceilings loops e-design every Tuesday morning. If you have missed previous issues please visit www.anutone.com/infobin/edesign.html or contact a Anutone rep.
